Profile

AI/ML Engineer and Computer Science student with a track record of building live, production-ready applications, real-time analytics dashboards, and robotics-related systems. Founder and CTO of Prae Technologies, creator of PraeHire, a live hiring and talent platform deployed at <https://prahire.web.app>. Comfortable taking products from idea to deployment, combining strong problem-solving skills with clean implementation and user-focused design.

Key Skills

- Programming: JavaScript, TypeScript, Python , Golang, Java, Html & CSS , C/C++ or Dart if applicable.
- Web Development: React/Next.js (mexty, PraeHire, portfolio), responsive UI, REST APIs, SPA development.
- AI & Data: Machine learning workflows, data processing, analytics dashboards, experimentation mindset.
- Tools & Platforms: Git, GitHub, GitHub Actions (CI/CD basics), Firebase/Firestore, GitHub Pages, web app deployment.
- Systems & Hardware: Hardware reverse engineering, basic robotics, sensor/actuator integration and debugging.

Experience

Founder & CTO – Prae Technologies

Lagos, Nigeria · 2024 – Present

- Lead technical vision and implementation for Prae Technologies, focusing on practical products that solve hiring and talent-matching problems.
- Designed and built PraeHire, a live recruitment and talent platform available at <https://prahire.web.app>, owning end-to-end architecture, UX, and deployment.
- Manage product roadmap, prioritize features, and ensure reliability, performance, and a smooth experience for both talent and employers.

AI/ML Engineer & Software Developer – Freelance

Remote · 2023 – Present

- Develop and maintain multiple public projects on GitHub, showcasing full-stack development and experimentation with AI and hardware.
- Deliver complete solutions including planning, implementation, testing, documentation, and version control using GitHub repositories and branches.
- Collaborate with clients and peers remotely, communicating clearly about requirements, trade-offs, and technical decisions.

Education

Bachelor of Science in Computer Science (In Progress)

University of the People

Expected Graduation: 2027

Relevant coursework

- Data Structures and Algorithms
- Object-Oriented Programming
- Software Engineering
- Database Systems
- Web Programming
- Artificial Intelligence
- For more coursework or certificates check: <https://www.linkedin.com/in/jerronce>

Selected Projects

PraeHire – Talent & Hiring Platform for Job Seekers and Students

- Live web platform connecting talent and employers, built as a modern web application and deployed at <https://praehire.web.app>.
- Implemented core flows (e.g. job/talent listings, application interactions, account handling) with a focus on clarity and usability.
- Tech stack: (React, TypeScript, HTML & CSS, Ai api keys, Mongo db, Backend too Firebase/Firestore, GitHub for version control).

mexty – Web Application

- Developed a web application (mexty) hosted on GitHub, focusing on clean UI and component-based architecture.
- Practiced modular React patterns and state management to keep code organized and maintainable.
- Repository: <https://github.com/Jerronce/mexty>

Realtime Analytics Dashboard

- Built a real-time analytics dashboard to visualize live metrics and KPIs directly in the browser.
- Optimized rendering and data updates for smooth performance and clear data storytelling.
- Repository: <https://github.com/Jerronce/realtime-analytics-dashboard>

Farad-App

- Implemented an application focused on technical/engineering workflows, with emphasis on core logic and user interaction.
- Structured the codebase to separate concerns (UI, state, data) and simplify future extension.
- Repository: <https://github.com/Jerronce/Farad-App>

RadarApp

- Created a radar-style interface to visualize tracked items or signals, focusing on motion/position representation on screen.
- Implemented smooth animations and updates, keeping the UI responsive across devices.
- Repository: <https://github.com/Jerronce/RadarApp>

Virtual Reality Controller

- Worked on a virtual reality controller project that brings together hardware control and software logic.
- Focused on mapping inputs to actions, experimenting with interaction models, and handling noisy or imperfect signals.
- Repository: https://github.com/Jerronce/Virtual_Reality_Controller

Portfolio & Experiments

- Personal portfolio and experiments hosted at <https://github.com/Jerronce/jerronce.github.io>, showcasing UI ideas, small tools, and practice projects.
- Use the site to demonstrate growth over time and provide employers with a single place to explore your work.

Leadership & Activities

- Founder and CTO of Prae Technologies, responsible for building the company's initial products and technical vision.
- Active in online developer communities, sharing progress, learning in public, and connecting with other engineers.
- Open to roles as Computer Scientist, Software Engineer, AI/ML Engineer, and User Experience Engineer, as indicated on LinkedIn.
